#### **DETAILED ACTION**

Receipt and entry of Applicants' Preliminary Amendment filed on June 28, 2004 is acknowledged.

# Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

stationary scroll member;

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3 and 7 are rejected under 35 U.S.C. 102(b) as being anticipated by Crum et al. (Crum) (Patent Number 5,772,411).

Regarding claims 1-3, as shown in Fig. 1, Crum discloses a compressor assembly comprising:

a housing (11) defining an interior plenum (18) and having an inlet opening (52); a stationary scroll member (24) fixed within the housing;

an orbiting scroll member (30) disposed within the housing and engaged with the

an oil sump (54) disposed within the interior plenum;

a shaft (34) rotatable about a shaft axis, the shaft operably coupled with the orbiting scroll member (30);

a motor (44) operably coupled with the shaft;

a crankcase (40) fixed within the housing and disposed between the orbiting scroll member and the motor, the crankcase having a thrust surface (88) engageable with the orbiting scroll member (30) and defining a first opening (not numbered; however, clearly seen in Fig. 1, the crankcase including a bearing support portion (66) defining a second opening (not numbered; however, clearly seen in Fig. 1), the shaft (34) freely extending through the first opening and extending through and bearingly supported at the second opening;

the crankcase (40) having a shield portion (not numbered; however, clearly seen in Fig. 4) extending from proximate the first opening to proximate the second opening and defining a partial enclosure for the shaft (34) between the first opening and the second opening, the shield portion defining an aperture (80) providing fluid communication between the interior plenum (18) and the partial enclosure, the aperture axially extending from proximate the first opening to proximate the second opening, the shield portion circumferentially extending about the shaft through an arc of at least 180 degrees and spaced radially outwardly of the shaft; and

a sheet-like baffle member (46) secured to the crankcase (40) and positioned proximate the inlet opening (52).

Regarding claims 2, 3 and 7, Crum further discloses a counterweight (70) disposed on the shaft (34) between the first and second openings within the partial enclosure; the baffle member (46) being positioned radially outwardly of the aperture (80- see Fig. 2); the shield portion circumferentially extends about the shaft (34) through an arc of at least about 270 degrees.

# Allowable Subject Matter

2. Claims 4 -6 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

3. Claims 8-13 are allowed.

### Prior Art

The IDS (PTO-1449) filed on September 8, 2003 and January 16, 2004 has been considered. An initialized copy is attached hereto.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure and consists of four patents.

Sawai et al. (Patent Number 4,886,435) discloses a scroll compressor with intermittent oil supply passage.

Shiibayashi et al. (Publication Number 61-112795) discloses a sealed type scroll compressor.

Nakagawa (Publication Number JP 03-054391) discloses an oil injection type compressor.

Perevozchikov (Publication Number JP 2002-122083) disclose a scroll compressor having a fluid injection passage to a movable pocket between both scrolls.

## Communication

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Theresa Trieu whose telephone number is 703-308-6434. The examiner can normally be reached on Monday-Friday 8:30am- 5:00pm.

Application/Control Number: 10/657,311

Art Unit: 3748
